CALLUSPEELING VEGETAL

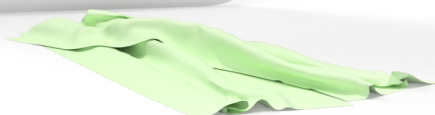

Product description

Keratolytic patches already ready to use, to be applied onto the foot. Thanks to the strength of the formula's medicinal plants, CALLUSPEELING VEGETAL® combines exceptional delicateness and unbeatable effectiveness, carrying out **6 powerful natural actions**:

- **Keratolytic**: In just 15 minutes, it easily removes calluses, sores and corns.
- **Healing**: It stimulates the re-epithelialisation and healing of sores.
- **Hydrating**: It carries out an effective softening and hydrating action and stimulates the regeneration of the epidermal cells.
- **Refreshing**: It provides immediate refreshing relief and stimulates microcirculation.
- **Sanitizing**: It has an antibacterial, antifungal and antiviral action.
- **Deodorising**: It absorbs unpleasant smells from the skin and gives feet a pleasant natural scent of herbs.

CALLUSPEELING VEGETAL® is a very pleasant and relaxing treatment that restores splendour to feet and leaves them exceptionally soft.

It is easy to do and does not need specific skills; just follow the instructions carefully to obtain optimum results from the first use.

Product characteristics

Each packet contains 4 patches of elastic fibre able to adapt perfectly to the anatomy of the foot, soaked in a special keratolytic gel formulated with a synergistic complex of **herbal and medicinal plant extracts**.

Containing **St. John's Wort**, Melaleuca Alternifolia (**Tea Tree**), **Celandine**, **Thuya**, **Garlic**, **Peppermint**, **Urea**, **Glycerin**, **Chlorophyll** and **Sodium Hydroxide**.

The technological core of Calluspeeling Vegetal is the Mavex Keratolytic Phytocomplex, an innovative keratolytic phytocomplex obtained from a synergistic mixture of medicinal plants encapsulated in a phospholipidic carrier structure. Thanks to its structure similar to that of the membrane lipids of epidermis cells, and to its bivalent lipophilic and hydrophilic nature, Mavex Keratolytic Phytocomplex is able to deliver, in an efficient and biocompatible way, the active principles contained in the plant extracts, providing an effective and instant keratolytic effect.

Calluspeeling Vegetal consists of **99.5% natural ingredients** and does not contain artificial fragrances. Its pleasant scent exclusively derives from plant extracts.

The precious active plant-based ingredients are encapsulated in biocompatible lipid structures that transport the active ingredients deep within, thus increasing their functional effectiveness.

TARGET:

All skin types. In case of serious diabetes, request advice from a specialist.

CALLUSPEELING VEGETAL

The medicinal herbs

St. John's wort

It has a powerful healing, anti-inflammatory and disinfecting effect. Numerous clinical and dermatological studies demonstrate its great effectiveness in treating sores, burns and ulcers.

Melaleuca Alternifolia (Tea Tree essential oil)

It has an effective antibacterial, antifungal and antiviral effect. It is an exceptional natural antifungal and an exceptional healer.

Celandine

It is rich in alkaloids and proteolytic enzymes which give it a strong keratolytic and caustic effect able to quickly and effectively eliminate calluses and verrucas.

Thuya

It has antibacterial, caustic and virostatic properties able to eliminate calluses, verrucas and warts with extraordinary effectiveness.

Garlic

In foot care it is appreciated for its keratolytic, antibacterial and antifungal properties. It is very effective on calluses and verrucas.

TARGET:

All skin types. In case of serious diabetes, request advice from a specialist.

CALLUSPEELING VEGETAL

Le erbe medicinali

Peppermint

Thanks to the presence of menthol, It provides immediate refreshing relief and stimulates microcirculation. It has invigorating, inflammation-reducing and purifying properties.

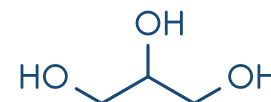

Urea

It encourages the detachment of dead surface cells with an excellent keratolytic effect. It regenerates the stratum corneum effectively restoring the "barrier" function of the skin. It keeps skin soft and hydrated.

Glycerin

Of plant origin, it has a softening and moisturising effect, protects the skin from drying out and encourages the regeneration of epidermal cells.

Chlorophyll

Extracted from plant leaves, it effectively absorbs unpleasant smells from the skin.

Sodium hydroxide

It is an alkaline inorganic compound derived from salt. It has the ability to soften the stratum corneum, stimulating the removal of calluses.
